P3300

PROXIMITY SENSOR, MAGNET ACTUATED

Sensor Description:

The P3000 Series sensor is a non-contact, solid state device that is magnetically actuated for a variety of proximity applications. The P3000 Series are designed to provide tight tolerance magnetic operating points. This ensures reliable and repeatable limit switching in both linear and angular position sensor applications. It has a rugged, thermoplastic housing and is ideally suited for many industrial environments. These products require a permanent magnet target, which offers the customer long range sensing and precise limit switching.

Features:

- Digital Output Signal
- 4-24 VDC Operation Range
- Current Sinking Output
- 20ma Continuous Operation
- Reverse Polarity Protection
- 0 to 100 kHz Operation
- Temperature Compensated
- Operation from -40°C to 125°C
- Rugged, thermoplastic housing

NOTE: A pull-up resistor is required on the open collector output to establish a quiescent voltage level. The pull-up resistor also provides faster rise times and improves noise immunity. Contact the factory for application assistance.

Magnetic Characteristics: ($V_{CC} = 4.5$ to 24 VDC @ 25°C)

Characteristics	Symbol	Limits			Units
